preventative maintenance solutions for your msr/ht feeders

Panasonic now offers a complete preventative maintenance solution for all MSR feeders. Each kit contains all of the parts needed to maintain MSR feeders and to keep them running at optimum rate.

To aid in the upkeep of these feeders, Panasonic is also offering tool kits and jigs designed specifically for MSR/HT feeders.

For customers that do not have the time or manpower to do this maintenance, Panasonic offers a full service rebuild and tune-up operation. All rebuilt feeders are cleaned and calibrated. All damaged and worn parts are replaced.

Part Numbers:
